CASE STUDY

HEALTHCARE

Encryption to safeguard electronic patient health information (ePHI)

Healthcare Agency

The challenge

This covered entity provides services to thousands of clients, helping them to manage their health and welfare as they age. Like all HIPAA Covered Entities, they have to follow the mandate to safeguard client information. Many of their staff utilize laptops and Microsoft Surface Pro devices. While these devices enable a very agile work experience, they pose a security risk as they are highly portable and more susceptible to theft and loss.

navitend's role

navitend's consulting team recommended and executed a cost-effective solution to encrypt all portable computing devices for the client. We were able to encrypt their fleet of devices quickly and add an increased level of security to their data and their business.

The result

This Covered Entity can deploy their workforce into the field with confidence knowing that they are not only helping their clients with their day-to-day needs, but are also doing so in a HIPAA-compliant manner. Everyone wins.

Talk to a person, not a ticket

Tell us what's going on. We'll listen, ask good questions, and give you informed and experienced guidance.
