MANUFACTURING

# Network consolidation and move

Printing and Fulfillment Service

## The challenge

A printing and fulfillment services company had a computer network lacking recommended domain organization – all of the computers were in “Workgroups”. This made day-to-day management of the network a challenge. Additionally, this company was looking to move across town into a larger facility.

## navitend’s role

navitend designed a new, consolidated network for the organization including a Windows domain and a professional, managed backup solution. As we became further engaged with our client we discovered that their phone system would not be a good fit for the new location. The client elected to have navitend install a Star2Star phone platform in their new facility.

## The result

Today this client has a solid, reliable and secure computer network and phone platform in their new facility.

## Talk to a person, not a ticket

Tell us what's going on. We'll listen, ask good questions, and give you informed and experienced guidance.
