CASE STUDY

MANUFACTURING

Virtual Private Network (VPN)

Sports Equipment Manufacturer

The challenge

A manufacturer and importer of recreational products needed more space to accommodate their growing staff. Because they were in a multi-year lease, they looked to their landlord for options. Those options were limited - they would either need to move the entire company to a larger space at another industrial park owned by the landlord, or take additional, non-contiguous space in a building across the parking lot. While the expansion project seemed less disruptive, there was no phone or data connectivity between the two buildings.

navitend's role

Using firewalls and high-speed broadband internet circuits to create a Virtual Private Network (VPN), navitend enabled our client to operate on a single network across multiple physical spaces.

The result

Our client was able to focus on running and growing their business without a costly and disruptive office relocation.

PostScript: This business has outgrown all of the available space in their office complex and has since procured a building of their own which navitend is helping them transition into.

Talk to a person, not a ticket
