

LOCAL GOVERNMENT & PUBLIC SAFETY

Upgraded the firewall and wireless access points for a township and police department

Philadelphia-area township, police, and fire department

The challenge

This Philadelphia-area public sector client's township offices, police department, and fire department share one network infrastructure. That infrastructure was dated and under-performing.

navitend's role

navitend upgraded the networking infrastructure, installing a next-generation firewall and modern wireless access points (WAPs), with minimal downtime for teams that can't afford to be offline.

The result

With a next-generation firewall and modern wireless access points in place, this public sector client is well prepared to serve its community.
